

## How to Remove Air from Your CISS

Remove the plug from the cartridge. Leave the pipe in the cartridge still.

Take one of the syringes that comes with the CISS and stick it in the hole.

Be sure it fits snugly in the hole and draw up on the plunger until ink starts to fill it. If your cartridge is empty continue to draw ink until at least 50% of the cartridge is filled.

Have some paper towels ready for any mess and you can put the ink from the syringe back into the reservoir.
